Most Improved Golfer Computation

The USGA recommended method for determining a club's most improved player for the given period is as follows:

- 1 - Add 12 to the player's Handicap Index at the start of the period.
This is value A.
- 2 - Add 12 to the player's Handicap Index at the end of the season.
This is value B.
- 3 - Divide value A by value B, calculating to three decimal places.
This is the Improvement Factor.

The player with the highest Improvement Factor should receive the most improved player award.

Example:

$$\begin{aligned}
 \text{Starting Handicap Index} &= 22.6 \\
 \text{Ending Handicap Index} &= 17.4 \\
 \text{Value A: } 22.6 + 12 &= 34.6 \\
 \text{Value B: } 17.4 + 12 &= 29.4 \\
 \text{Improvement Factor is} & \\
 \text{A / B: } 34.6 / 29.4 &= 1.177
 \end{aligned}$$
